Cardiac Arrests are not Heart Attacks

1. Heart attacks occur when a coronary artery becomes blocked preventing oxygen to the heart being received.
2. Cardiac arrest is the sudden loss of heart function, in turn stopping the pumping of blood around the body.
3. Both are emergencies (call 000) and require CPR.
4. An AED will automatically analyse the patients heart rhythm to see if a shock is required.

IF not required: The AED will NOT shock the patient.

To Auto or Semi Auto?

Is the rescuer AED Trained? - **If yes**

Full Auto

Semi Auto

Are they cool, calm & collected? - **If yes**

Is it for a Public Area? - **If yes**
